Applies To: Windows Server Semi-Annual Channel, Windows Server 2016, Windows 10

Computers that are running volume licensed editions of Windows Server, Windows 10, Windows 8.1, Windows Server 2012 R2, Windows 8, Windows Server 2012, Windows 7, Windows Server 2008 R2, Windows Vista, and Windows Server 2008 are, by default, KMS clients with no additional configuration needed.

**To use the keys listed here (which are GVLKs), you must first have a KMS host running in your deployment.** If you haven't already configured a KMS host, see [Deploy KMS Activation](#) for steps to set one up.

If you are converting a computer from a KMS host, MAK, or retail edition of Windows to a KMS client, install the applicable setup key (GVLK) from the following tables. To install a client setup key, open an administrative command prompt on the client, type **slmgr /ipk <setup key>** and then press **Enter**.

### If you want to...

Activate Windows outside of a volume-activation scenario (that is, you're trying to activate a retail version of Windows), **these keys will not work.**

Fix this error that you get when you try to activate a Windows 8.1, Windows Server 2012 R2 or newer system: "Error: 0xC004F050 The Software Licensing Service reported that the product key is invalid"...

### ...use these resources

Use these links for retail versions of Windows:

[Install this update](#) on the KMS host if it is running Windows 8.1, Windows Server 2012 R2, Windows 8, or Windows Server 2012.

If you are running Windows Server 2008 R2 or Windows 7, be on the lookout for an update to support using those as KMS hosts for Windows 10 clients.
